Assignment 1

Consider the following problem:

A **Cricket Tournament Management System** is designed to efficiently manage cricket tournaments, including team registrations, match scheduling, player statistics, and results tracking. The system will handle multiple tournaments, teams, and players while ensuring smooth coordination of matches.

Now design ER Diagram for the above problem and conver the ERD to relational schemas.

Instructions: A template is shared, follow that to prepare assignment.

Warnings:

1. Don't use GPT or any LLM model to generate solution.
2. Don't copy from others.
